                                                                                                                                                                                                                                                                                                                                                                                                                                                           in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 1066 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Wanlewski in the Laboratory of Dr. S. A. Williams.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /lab_host="XLI-Blue MFF/"

/note="Vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2:
Xho I; Filarial nematode parasite of humans. Third-stage
larvae, L3, were isolated from infected black files in
Cameroon (forest strain). The L3 were cultured in 20% FCS
in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in
culture. L3 of 0. volvulus molt to fourth-stage larvae by
day 5 in culture. mRNA was isolated from approximately
6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3
                                                                                                                                                                                                                                                                                                                                                                                           The library is available from Dr. Sara Lustigman (email: slustigm@nybc.org)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note="Vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: /note="Vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dx. S. A. Williams.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The library is available from Dr. Sara Lustigman (email: slustigm@nybc.org)."

Third-stage larvae, L3, were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded CDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I: The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email: slustigmenybo.org)."

            //note="Wector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 1056 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of DT. S. A. Williams.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        //note="Vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email: slustigmenybc.org)."

                                                                                                                                                                                                                                                                                                                                                                                                                                      in culture, and converted to double-stranded CDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email: slustigm@nybc.org)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note="Vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black files in cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. I3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email: slustigman)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3
                                                                                                                                                                                                                                      volvulus

Xho I; Filarial nematode parasite of humans. Third-stage
larvae, L3, were isolated from infected black files in
Cameroon (forest strain). The L3 were cultured in 20% FCS
in IMDM+ NCTC 135 and collected after day 1, 2 or 3 in
culture. L3 of O. volvulus molt to fourth-stage larvae by
day 5 in culture. mRNA was isolated from approximately
6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3
in culture, and converted to double-stranded cDNA using
reverse transcriptase and oligo(dT) followed by RNase H
and DNA pol I. The library was constructed in the lambda
Uni-Zap XR vector and has 1 x 10E6 independent
recombinants and the average insert size is -1200 bp. The
library was constructed by Sara Lustigman and Michelle
Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence was deduced from a cDNA insert from pAE-III-202-4 (FERM BP-3172). The vector seas a source for a DNA fragment encoding PHL for the construction of an expression vector for the prepn. of recombinant PHL. The protein may be truncated to comprise only residues 383-706 or 383-713. The PHL catalyses the reaction: R-GlyOH -> R-NH2. It can be used to produce peptides will amidated C-termini, e.g. calcitonin, growth hormone, LH-RH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel DNA encoding peptidyl hydroxy:glycine N-C lyase (PHL) used to prepare PHL which can be used in the amidation of peptide(s) e.g. human calcitonin.

Disclosure; 7pp; English.
The sequence encodes a derivative of the mature C-terminal alpha-amidating enzyme from plasmid pXA799.
The plasmid was screened from an E.coli library using plasmid pXA457 to screen a larger library.
Although pXA799 is similar to pXA457 at the N-terminus, it has an are hydrophobic elements suggesting a membrane function.

Plasmid pXA799 contains a sequence derived from Xenopus laevis.

The plasmid was screened from an E.coli library using plasmid pXA457
                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinant C terminal alpha amidating enzymes of xenopus laevis and their precursors dexyribonucleic acid encoding sequences.

                                                                                                                                                                                                                                                                                                                         to screen a larger library.

Although the gene product is similar to that of pXA457 at the N-terminus, it has an area of hydrophobic elements suggesting a membrane function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                581
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          631

Jmu-1S cells (i.e. CHO cells expressing a peptidyl C-terminal alphamuls cells (i.e. CHO cells expressing a peptidyl C-terminal alphamuls cenzyme (AB)) were suspended in F-12 medium to which aliquots of trichostatin were added. Cells were cultured for 3 days at 37 deg and then assayed for AE. Without trichostatin, AE productivity was 708 U/ml. At 10, 50, 100 and 200 nM trichostatin, AE productivities were respectively 866, 1897, 1894 and 3359 U/ml.

This sequence represents the feline infectious peritonitis 1 virus (FIPV-I) spike protein. The FIPV-I spike protein may be used in the production of a vaccine for the prevention and treatment of FIPV-I infection. The spike protein may be produced by transforming a host cell with the spike protein DNA and expressing the sequence such sequence 1464 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Feline infectious peritonitis 1 virus spike protein.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pf faces or patient samples

Disclosure; Fig 7; 165pp; English.

This is the amino acid sequence of the protein encoded by the wbdM gene of a gene cluster (see x06748) involved in the biosynthesis of the Escherichia coli 0111 0 antigen. The protein shows high homology with TrsE of Yersinia enterocholitica, and is predicted to be a colitose or glucose transferase. The use of nucleic acid molecules derived from particular assembly and transport genes, capaciticularly wbd (transferase), wzx (flippase) and wzy (polymerase) genes, within 0 antigen gene clusters improves the specificity of methods for the detection and identification of 0 antigens, e.g. in testing food- or faecal-derived samples, or samples from patients. The 0 antigen is a major virulence factor of enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic colitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Align seg 1/1 to: W88310 from: 1 to:

Claim 11; Fig 10a-b; 154pp; English.

Rovel yeast SRB (suppressor of RNA polymerase B) proteins SRB4, SRB5, SRB0, SRB9, SRB1 (w13821-28) are transcription regulatory factors that act as positive and negative regulators of RNA polymerase II activity, and are components of the RNA polymerase II activity, and are components of the RNA polymerase II clentify transcription factors involved in RNA polymerase II

C-terminal domain (CTD) function. SRB8 and SRB9 appear to repress CTD activity. Genomic clones (T59904-11) for the SRB appear been obtd. SRBs can be used to treat diseases resulting from alteration or deletion of the SRB gene, pref. by gene transcription alteration or the SRB stabe besided in in vitro transcription of DNA and to identify cpds. that modify gene transcription of DNA and to identify Sequence 1226 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Align seg 1/1 to: W13825

CDNA libraries were prepared from human thyroid gland poly(A) RNA in lambda gt11 and gt10. These were screened using probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gt10 library, including gt10chT2.

Restriction analysis indicated that gt10chT2 encoded a different

CDNA libraries were prepared from human thyroid gland poly(A) RNA cDNA libraries were prepared from busing probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gt10 library, including gt10ch101.

Restriction analysis indicated that gt10ch7101 encodes a different type of enzyme to one of the other two clones. The DNA can be the into vectors for expression in E.coli or (more efficiently)

CDNA libraries were prepared from human thyroid gland poly(A) RNA in lambda gtl1 and gtl0. These were screened using probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gtl0 library, including gtl0chT201.

Restriction analysis indicated that gtl0chT201 encodes a different type of enzyme to the other two clones. The DNA can be inserted type of enzyme to the other two clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Lambda gt10ch201 encoded C-terminal alpha amidating enzyme. C-terminal alpha amidating enzyme; human thyroid gland; lambda gt10ch201.

                                                                                                                                                        Prodn. of alpha amidating enzyme - using prokaryotic or eukaryotic expression vectors having transcriptional promoter Claim 3; page 19; 24pp; English.

The corrsp. DNA sequence hybridises, under stringent conditions, with a DNA sequence (I) which encodes an alpha amidating enzyme (AEE) and is foreign to the host cell into which it is transformed. (I) is connected to a promoter and is contained in an expression vector. The AEE encoded is used as a catalyst in the conversion of a peptidyl substrate to a corresp. peptidyl amide. This can be used for making a protein biologically active, e.g. calcitonin or growth hormone releasing factor. See also 005637.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1463 GlyPheAsnSerTyrThrTyrThrAspIleSerThrGlyPhePheGluGl 1479

ences of Tellon of a B cDNA. ence 944
recombinant DNA expression s A stop codon can be placed u pref. between posns. 2340 an
amidating anzyme (AE) useful for post translational modifice of other recombinant polypeptides such as calcitonin. The se includes a membrane spanning domain which may be undesirable
be divided into distinct types, the sequence below being encode Type B. (Type A is given in R10322). The sequence can be insertinto expression vectors for the prodn. of recombinant alpha-
Disclosure; rage /; 52pp; English. The sequence was derived from DNA isolated from lil from RNA extracted from rat medullary thyroid carc derived cell lines such as IVI 10028. The cDNAs e.
PT or euraryotic hosts contg. a recombinant expression vector contg. PT the corresp. DNA sequence.

The present sequence is a segment of the desmosomal cadherin (DC), desmoglein Dsg2, which is exposed on the surface of epithelial or carcinoma cells and not bound to desmosomes. An antibody (Ab) and directed against epitopes of the present sequence can be used to directed against epitopes of the present sequence can be used to diagnose, i.e. to detect carcinoma cells, especially micrometastases, not bound to desmosomes to separate, enrich or detect living or fixed carcinoma cells by cell sorting methods and cas a therapeutic to deliver agents, e.g. other Ab or toxins, to metastatic carcinoma, and detects parts of DC that are not accessible in desmosome bound cells, as in normal tissue or

                                                                                                                                                           Claim 1; Fig 1; 18pp; Japanese.

The sequence was deduced from the DNA sequence determined from clone isolated from a library prepd. from mRNA extracted from horse atrium tissue. The sequence is one of four similar ones provided which all have the same sequence up to residue 809 at which point they diverge, having different C-termini. The different termini are created by deletions in the last portion
                                                                                                                                                                                                                                                                                                        \ensuremath{\text{N-PSDB}}\xspace , \ensuremath{\text{Q20198}}\xspace . coding for peptide C terminal amidation enzyme
